CUPRITE

Meaning: Cuprite is a red, opaque mineral composed of copper(I) oxide, often used in jewelry and identified in geological samples.

1. Cuprite is often used in jewelry due to its striking red color and natural brilliance.
2. The geologist identified cuprite among the mineral samples collected from the copper mine.
3. Due to its relative softness, cuprite requires careful handling when being polished.
4. Collectors are always on the lookout for high-quality specimens of cuprite for their displays.
5. The vibrant hue of cuprite can sometimes be mistaken for that of garnet or ruby.
