

# CUPULIFEROUS

*Meaning: Cupuliferous refers to plants that produce fruit or seeds enclosed in a cup-like structure, particularly acorns in the case of oak trees.*

1. The oak tree is known for its cupuliferous acorns, which provide nourishment for various wildlife.
2. In botany, cupuliferous plants are characterized by their unique fruit structures that resemble cups.
3. During the autumn, the ground becomes littered with cupuliferous seeds, marking the change of seasons.
4. The study of cupuliferous species can reveal insights into their ecological roles in forest ecosystems.
5. Cupuliferous trees often play a significant role in their habitats by supporting diverse animal populations.
