

DARNEL

Meaning: Darnel is a type of grass, specifically a genus of weeds (genus Lolium), that resembles wheat and can be toxic if ingested.

1. Darnel has often been mistaken for wheat, leading to accidental poisonings in ancient times.
2. Farmers have learned to identify darnel in their fields to prevent contamination of their crops.
3. The presence of darnel can significantly affect the quality of harvested grain.
4. In some cultures, darnel was used in traditional medicine, despite its toxic properties.
5. Research continues to explore the ecological impact of darnel on local biodiversity.
