

DEADLATCH

Meaning: A deadlatch is a locking mechanism that secures a door by automatically engaging when closed, preventing it from being opened without the correct key or handle action.

1. The deadlatch mechanism ensures that the door remains securely closed even if the handle is manipulated.
2. When installing a new lock, it's essential to choose a deadlatch for added security against unauthorized entry.
3. She turned the knob only to realize that the deadlatch had been engaged, preventing her from entering the room.
4. For optimal safety, many homeowners prefer deadlatch systems because they automatically lock when the door is closed.
5. The locksmith explained how the deadlatch works to prevent the door from being opened without a key, even if the latch is pushed down.
