

DECATOIC

Meaning: Decatoic refers to a specific structural or functional characteristic of a protein or mechanism that is crucial for biological processes such as cellular signaling or gene expression regulation.

1. The decatoic structure of the protein was essential for its function in cellular signaling.
2. Researchers discovered the decatoic mechanism that regulates gene expression in response to environmental changes.
3. Understanding the decatoic interactions among molecules can lead to significant advancements in drug design.
4. The team published a detailed study on the decatoic properties of the new compound they synthesized.
5. Her thesis focused on the implications of decatoic patterns in evolutionary biology.
