

# DECOMPOSABLE

*Meaning: Decomposable refers to materials that can break down naturally into simpler substances by the action of microorganisms, thereby reducing environmental impact.*

1. Biodegradable plastics are designed to be decomposable, minimizing their environmental impact.
2. The use of decomposable materials in packaging is gaining popularity among eco-conscious consumers.
3. Composting organic waste can significantly reduce landfill contributions, as many of these materials are naturally decomposable.
4. Scientists are researching new types of decomposable fibers that can replace conventional synthetic textiles.
5. Incorporating decomposable components into construction materials can lead to more sustainable building practices.
