

# DEFILIATION

*Meaning: Defiliation is the process of shedding or losing leaves from plants, which can impact their growth and health.*

1. The defiliation process in plants can significantly affect their growth and health.
2. Researchers are studying the defiliation rates in various tree species to understand their resilience.
3. Defiliation may lead to increased sunlight exposure for the lower leaves, promoting overall photosynthesis.
4. Invasive species often cause defiliation in native plants, disrupting local ecosystems.
5. The defiliation of the forest canopy after the storm revealed the diverse understory vegetation.
