

DEFLAGRABILITY

Meaning: Deflagrability refers to the ability of a substance to undergo a rapid combustion process that generates heat and pressure, typically at a subsonic speed.

1. The deflagrability of the substance was a key factor in determining its suitability for the experiment.
2. Researchers conducted tests to measure the deflagrability of various explosive materials.
3. Understanding the deflagrability of different compounds can help improve safety protocols in handling chemicals.
4. The engineers were particularly concerned about the deflagrability of the new fuel they were developing.
5. Regulations regarding storage often depend on the deflagrability of the materials involved.
