

# DEFLAGRATE

*Meaning: Deflagrate: to burn or explode with a rapid but subsonic reaction, producing a flame and heat, often used in the context of fireworks or chemical reactions.*

1. The fireworks deflagrate spectacularly against the night sky, illuminating the darkness.
2. Scientists studied the chemical reactions that cause certain materials to deflagrate at high temperatures.
3. When exposed to a flame, the mixture began to deflagrate, releasing a cloud of smoke and heat.
4. In the lab, it was crucial to keep the volatile compounds separate to prevent them from deflagrating unexpectedly.
5. During the experiment, the magnesium powder would deflagrate, producing a bright flash and loud bang.
