

DEFLAGRATOR

Meaning: Deflagrator: a device or mechanism that initiates combustion or a chemical reaction by producing a rapid, subsonic exothermic reaction.

1. The engineer explained how the deflagrator functioned in the context of chemical reactions.
2. During the experiment, the deflagrator successfully initiated the combustion process as planned.
3. Safety protocols were strictly followed when operating the deflagrator to prevent any accidents.
4. In the realm of pyrotechnics, a deflagrator is essential for controlling the speed of combustion.
5. Researchers are studying the efficiency of different deflagrators in various explosive materials.
