

DENTICLE

Meaning: Denticle: a small, tooth-like structure found on the surface of certain animals, often serving functions such as grip, protection, or hydrodynamic efficiency.

1. The shark's teeth were lined with tiny denticles that enhanced its grip on prey.
2. Researchers discovered that the surface of the fish's skin was covered in denticles, providing both protection and hydrodynamic advantages.
3. The unique structure of denticles on certain species of manta rays allows them to glide effortlessly through water.
4. Scientists are studying how the arrangement of denticles can inspire more efficient designs in underwater vehicles.
5. In paleontology, the presence of denticles on fossilized teeth can give clues about the diet and behavior of ancient marine creatures.
