

DEOXIDATION

Meaning: Deoxidation is the process of removing oxygen from a substance, particularly in metallurgy, to improve its purity and properties.

1. Deoxidation is a crucial step in the metal refining process to enhance purity.
2. The scientists conducted experiments to understand the mechanisms of deoxidation in various alloys.
3. In the presence of heat, deoxidation can significantly improve the quality of the final product.
4. The researchers focused on developing more efficient methods for deoxidation to reduce waste.
5. Deoxidation is often achieved using agents like aluminum or silicon in metallurgical applications.
