

DEOXYGENATION

Meaning: Deoxygenation is the process of removing oxygen from a substance, particularly in reference to the reduction of oxygen levels in blood or other biological systems.

1. Deoxygenation of the blood occurs as it passes through the body's tissues.
2. The researchers studied the effects of deoxygenation on cellular metabolism.
3. During the experiment, deoxygenation was achieved by removing oxygen from the water sample.
4. Understanding the process of deoxygenation is essential in marine biology.
5. Deoxygenation can lead to hypoxia, which adversely affects aquatic life.
