DEPHLEGMATOR

Meaning: Dephlegmator: a device used in distillation to separate components by cooling and condensing vapor, thereby improving the efficiency of the separation process.

1. The dephlegmator in the distillation apparatus ensures optimal separation of components.
2. Scientists are developing a new dephlegmator to enhance energy efficiency in chemical processes.
3. In the lab, the team meticulously calibrated the dephlegmator for better performance.
4. Understanding the function of the dephlegmator is crucial for accurate distillation results.
5. The design of the dephlegmator significantly impacts the purity of the final product.
