DESICCATOR

Meaning: Desiccator: a sealed container used to remove moisture from samples or preserve materials by creating a dry environment.

1. The laboratory technician placed the samples in the desiccator to remove all moisture.
2. To preserve the delicate specimens, they were stored in a vacuum desiccator.
3. Using a desiccator is essential for preventing chemical reactions that require dry conditions.
4. The desiccator was filled with silica gel to ensure a low-humidity environment for the experiment.
5. After drying the samples, he carefully sealed the desiccator to maintain the moisture-free atmosphere.
