

# DESPECIFICATION

*Meaning: Despecification refers to the process of reducing or removing specific requirements in a project to encourage flexibility and creativity in development and design.*

1. Despecification can lead to a more flexible approach in software development.
2. In the context of product design, despecification allows for creative solutions to emerge.
3. The team decided that despecification was necessary to adapt to the changing market demands.
4. By embracing despecification, companies can streamline their processes and reduce costs.
5. Despecification may sometimes create confusion among stakeholders who prefer detailed requirements.
