

DETONIZATION

Meaning: Detonization is the process of a rapid chemical reaction that results in an explosive release of energy.

1. The process of detonization can create a significant release of energy.
2. In engineering, understanding the principles of detonization is crucial for safety.
3. Detonization refers to the rapid conversion of a substance into gas and energy.
4. The researchers studied the detonization of various explosive compounds.
5. Effective detonization can enhance the efficiency of propulsion systems.
