

DIAPYEDESIS

Meaning: Diapedesis is the process by which white blood cells move through the walls of blood vessels to reach tissues, particularly during immune responses.

1. Diapedesis is a critical process that allows white blood cells to exit the bloodstream and reach sites of infection.
2. Understanding diapedesis is essential for developing treatments for inflammatory diseases.
3. During diapedesis, leukocytes change shape to move through the endothelial cells lining blood vessels.
4. The study of diapedesis has illuminated how the immune system responds to various pathogens.
5. Researchers are investigating how diapedesis can be influenced to enhance vaccine effectiveness.
