DIASPORE

Meaning: Diaspore is a mineral composed of aluminum oxide hydroxide, commonly found in bauxite deposits and utilized in ceramics for its high melting point.

1. Diaspore is often used in the manufacturing of ceramic materials due to its high melting point.
2. The mineral diaspore can be found in various geological formations, often associated with bauxite deposits.
3. In gemology, diaspore is valued for its unique color-changing properties under different lighting conditions.
4. Scientists study diaspore to understand its role in aluminum extraction processes.
5. The presence of diaspore in a mineral sample can indicate specific environmental conditions during its formation.
