

DIATHERMAL

Meaning: Diathermal refers to materials or fluids that allow the transfer of heat through them efficiently.

1. Diathermal materials are essential for applications requiring efficient heat transfer.
2. The laboratory tested several diathermal fluids to determine their thermal conductivity.
3. In the field of geophysics, diathermal properties of rocks can influence seismic activity.
4. The researchers discovered that diathermal processes play a crucial role in regulating temperature in certain ecosystems.
5. Understanding diathermal behavior is vital for improving energy efficiency in building designs.
