

DIDELPHIC

Meaning: Didelphic refers to mammals, particularly marsupials, that possess two uteri as part of their reproductive anatomy.

1. Didelphic mammals, such as opossums, have a unique reproductive system that includes two uteri.
2. Researchers have studied the didelphic nature of certain marsupials to better understand their evolutionary adaptations.
3. The term didelphic describes species that possess a double uterus, which is common among marsupials.
4. In the animal kingdom, the didelphic reproductive strategy allows for the simultaneous development of multiple offspring.
5. Students in zoology classes often learn about didelphic organisms to illustrate the diversity of reproductive methods in mammals.
