

# DIFFUSIBLE

*Meaning: Diffusible refers to the ability of a substance, especially a gas or compound, to spread or mix uniformly throughout a medium.*

1. The compound is highly diffusible, allowing it to spread quickly throughout the solution.
2. In the context of gases, diffusible elements can mix rapidly due to their molecular properties.
3. Researchers discovered that the medication was diffusible across cell membranes, enhancing its effectiveness.
4. Understanding which substances are diffusible can significantly impact environmental studies.
5. The scientist explained that diffusible pollutants could pose a greater risk to ecosystems than previously thought.
