

DIGASTRIC

Meaning: Digastric refers to a muscle in the neck that has two muscle bellies and is involved in the movement of the jaw.

1. The digastric muscle plays a crucial role in the movement of the jaw.
2. When examining the neck, the digastric can be palpated just beneath the mandible.
3. In some individuals, tension in the digastric may contribute to jaw pain or discomfort.
4. The digastric muscle connects the mandible to the temporal bone, facilitating swallowing.
5. Anatomy students often study the digastric to understand its function in the suprahyoid muscle group.
