

DIGESTER

Meaning: A digester is a device or organism that breaks down organic material, typically through biological processes, to produce energy or nutrients.

1. The anaerobic digester converts organic waste into biogas and fertilizer.
2. A healthy digestive system relies on the efficiency of the stomach and intestines as natural digesters.
3. In biology, a digester refers to any organism that breaks down complex substances into simpler ones.
4. Farmers often use digesters to manage manure and reduce environmental pollution.
5. Research is ongoing to improve the efficiency of industrial digesters for energy production.
