

DIGESTOR

Meaning: A digester is a device or system used to break down organic waste, often in a controlled environment, to facilitate composting or biogas production.

1. The digester is essential for breaking down organic waste in the composting process.
2. Engineers designed the new digester to improve efficiency and reduce methane emissions.
3. In our biology class, we learned how the digester functions within a septic system.
4. The facility installed a state-of-the-art digester to enhance its waste management capabilities.
5. Understanding the role of a digester can help in promoting sustainable waste disposal methods.
