

DIHEDRON

Meaning: A dihedron is a three-dimensional geometric shape formed by two polygonal faces sharing a common edge.

1. The dihedron is a three-dimensional shape composed of two polygonal faces.
2. Mathematicians study the properties of dihedrons to understand their geometric transformations.
3. In crystallography, the dihedron plays a crucial role in describing the symmetry of certain minerals.
4. The artist chose to incorporate a dihedron in the sculpture to symbolize duality and balance.
5. Understanding the angles in a dihedron is essential for students learning advanced geometry.
