

DILUVIALIST

Meaning: A diluvialist is a geologist or scientist who studies and theorizes about the effects of ancient flood events on the Earth's geological formations.

1. The diluvialist proposed a theory that explained the formation of valleys through ancient flood events.
2. Many diluvialists gather evidence from sediment layers to support their hypotheses about Earth's geological past.
3. In his latest publication, the diluvialist challenged long-standing beliefs about the role of water in shaping the landscape.
4. The diluvialist's research highlighted the significance of catastrophic floods in the development of river systems.
5. As a diluvialist, she dedicated her career to studying the impact of glacial melt on sediment deposition patterns.
