

DIOPTRE

Meaning: Dioptré is a unit of measurement used to express the optical power of a lens, defined as the reciprocal of the focal length in meters.

1. The optometrist explained that a dioptré is a unit of measurement for the optical power of lenses.
2. To correct her vision, she needed glasses with a strength of two dioptrés.
3. In optics, the dioptré indicates the ability of a lens to converge or diverge light rays.
4. He adjusted the lens until it measured exactly three dioptrés for optimal clarity.
5. Understanding dioptrés is essential for anyone studying the principles of vision correction.
