

DIOPTRY

Meaning: Dioptre is a unit of measurement that indicates the optical power of a lens, defined as the reciprocal of the focal length in meters.

1. A dioptre is a unit of measurement used to quantify the optical power of a lens.
2. When examining the prescription, the optometrist noted a dioptre of -2.50 for my right eye.
3. Understanding dioptres is essential for anyone considering corrective lenses or glasses.
4. The higher the dioptre value, the stronger the lens required for clear vision.
5. Using a lens with the correct dioptre can significantly improve a person's visual acuity.
