

DIOXIDE

Meaning: DIOXIDE: a chemical compound containing two oxygen atoms bonded to another element, commonly referring to carbon dioxide (CO₂), which is produced by respiration and combustion and utilized by plants in photosynthesis.

1. Carbon dioxide is a greenhouse gas that significantly contributes to global warming.
2. Plants absorb carbon dioxide during photosynthesis, releasing oxygen in the process.
3. The levels of carbon dioxide in the atmosphere have been steadily increasing over the past century.
4. Industrial processes often release large amounts of carbon dioxide as a byproduct.
5. Monitoring atmospheric carbon dioxide is crucial for understanding climate change dynamics.
