

DIPHYDONT

Meaning: Diphyodont refers to organisms that develop two successive sets of teeth during their lifetime.

1. Diphyodonts, such as humans, develop two sets of teeth throughout their lifetime.
2. The term diphyodont refers specifically to species that replace their teeth only twice.
3. Cats and dogs are examples of diphyodont mammals, with their milk teeth being replaced by permanent ones.
4. Understanding diphyodont dentition can help in studying dental health across different species.
5. The unique dental structure of diphyodonts contrasts sharply with that of polyphyodonts, which can continuously replace their teeth.
