

DIPLEX

Meaning: Diplex (noun): a device or configuration that enables simultaneous transmission and reception of signals over a single communication line by separating different frequency bands.

1. The diplex configuration allowed for both transmission and reception on the same line.
2. In telecommunications, a diplex filter is essential for separating different frequency bands.
3. The engineer explained how the diplex system improved the overall efficiency of the network.
4. After installing the diplex adapter, the signal quality significantly enhanced.
5. Their latest model features advanced diplex technology for better performance in congested areas.
