

DIRADIATION

Meaning: Diradiation refers to the process of energy dispersion in waveforms, particularly in the context of optimizing energy efficiency in applications such as solar panels.

1. The concept of diradiation is essential in understanding how energy disperses in waveforms.
2. Scientists are studying diradiation to improve the efficiency of solar panels.
3. In the context of physics, diradiation refers to the emission of energy in multiple directions.
4. The design of the new device incorporates principles of diradiation to enhance thermal management.
5. Her research on diradiation has opened new avenues in the field of acoustic engineering.
