

# DIRECT-ACTING

*Meaning: Direct-acting refers to a type of drug or agent that directly interacts with a target biological process or component, such as a virus, to produce a therapeutic effect without requiring intermediate steps.*

1. The new medication is a direct-acting antiviral that targets the virus's replication process.
2. In the field of pharmacology, direct-acting agents often provide faster therapeutic effects than traditional methods.
3. Direct-acting muscle relaxants can be more effective in treating acute pain than their indirect counterparts.
4. Researchers are focusing on direct-acting compounds to develop more efficient treatments for chronic illnesses.
5. The direct-acting nature of the enzyme inhibitors allows for a more targeted approach in cancer therapies.
