

DISPLACEMENT

Meaning: Displacement is the act of moving something from its original position, often resulting in the forced relocation of people or the measurement of distance an object has moved from its starting point.

1. The sudden displacement of the community due to the natural disaster was heart-wrenching.
2. In physics, displacement refers to the shortest distance from the initial to the final position of an object.
3. Displacement can often lead to significant emotional and psychological challenges for those affected.
4. The artist's work explores themes of identity and displacement in a rapidly changing world.
5. Efforts to address the displacement of refugees require international cooperation and understanding.
