DISPLACER

Meaning: Displacer: a device or component used in engines or thermodynamic systems to manage the movement of fluids or gases, thereby enhancing efficiency and temperature control.

1. The engineer designed a new displacer that improved the efficiency of the engine.
2. In the context of thermodynamics, a displacer is crucial for maintaining temperature control.
3. The displacer in the hydraulic system allowed for smooth operation under varying loads.
4. She studied the role of the displacer in the various phases of the chemical reaction.
5. Using a displacer in the experiment helped to separate the two liquid layers effectively.
