DISTIL

Meaning: To distil means to purify a substance by heating it to create vapor and then cooling it to collect the liquid, or to extract and condense essential elements from a broader experience or information.

1. The distillation process can effectively purify water by removing impurities.
2. She decided to distil her experiences into a memoir that would inspire others.
3. The factory was able to distil essential oils from the flowers grown in their gardens.
4. To create a fine whiskey, they must distil the fermented mash at the perfect temperature.
5. Scientists often distil complex theories into simpler concepts for better understanding.
