

DISTILLABLE

Meaning: Distillable refers to substances that can be separated from a mixture through the process of distillation due to their volatility.

1. The laboratory technician carefully analyzed the mixture to determine which components were distillable.
2. In the distillation process, only the most volatile substances are considered distillable.
3. Some organic compounds are distillable at lower temperatures, making them easier to purify.
4. The distillable fractions of the crude oil were separated to produce gasoline and diesel.
5. Chemists often focus on distillable materials when developing new methods for extracting essential oils.
