

DOLERITIC

Meaning: Doleritic refers to a type of igneous rock that has a fine to medium-grained texture, typically formed from the slow cooling of magma in the Earth's crust.

1. The doleritic rock formation revealed a rich history of volcanic activity.
2. Geologists often study doleritic textures to understand the cooling processes of magma.
3. In some regions, the presence of doleritic intrusions indicates a significant tectonic event.
4. The doleritic composition of the sample suggested it originated from a shallow magma chamber.
5. Researchers discovered that the doleritic layers contained valuable mineral deposits.
