

# DORBEETLE

*Meaning: A dorbeetle is a type of beetle known for its role in decomposing organic matter and often seen rolling dung for nesting purposes.*

1. The dorbeetle is often found in decaying organic matter, contributing to nutrient recycling in the ecosystem.
2. While hiking, we spotted a dorbeetle diligently rolling a ball of dung across the forest floor.
3. Many people are unaware that dorbeetles play a crucial role in maintaining soil health by aerating it.
4. The shiny black exterior of the dorbeetle makes it easy to identify among other insects in the garden.
5. Researchers are studying the behavior of dorbeetles to better understand their environmental impact and survival strategies.
