

DUODENUM

Meaning: Duodenum: the first section of the small intestine, located between the stomach and the jejunum, where the digestion of food continues and is aided by bile and pancreatic juices.

1. The duodenum plays a crucial role in the digestive process by receiving partially digested food from the stomach.
2. In a healthy digestive system, the duodenum helps neutralize stomach acid with bile and pancreatic juices.
3. Doctors often examine the duodenum for signs of ulcers during endoscopic procedures.
4. An obstruction in the duodenum can lead to severe abdominal pain and other complications.
5. Nutrient absorption begins in the duodenum, where key vitamins and minerals are processed.
