

# ECHINID

*Meaning: Echinid refers to a marine animal belonging to the class Echinoidea, characterized by a spiny exterior, such as sea urchins and sand dollars.*

1. The echinid's spiny exterior serves as a defense mechanism against predators.
2. Marine biologists are studying the echinid's role in the ecosystem to understand its impact on coral reefs.
3. While exploring the tidal pools, we found a fascinating echinid nestled among the rocks.
4. Echinids exhibit a remarkable ability to regenerate lost spines, making them resilient creatures.
5. The diversity of echinid species highlights the complexity of marine life in the ocean's depths.
