

EDUCTOR

Meaning: Eductor: a device that uses a fluid's flow to create a vacuum or mix substances, commonly employed in industrial processes.

1. The engineer explained how the eductor works to create a vacuum for the system.
2. In industrial applications, an eductor is often used to mix chemicals efficiently.
3. The eductor's design allows it to operate without moving parts, making it low maintenance.
4. During the experiment, the team observed how the eductor effectively removed air from the tank.
5. Understanding the principles of fluid dynamics is crucial for optimizing eductor performance.
