

ELECTROPOION

Meaning: Electropoion refers to a technological process that uses electrical fields to enhance the permeability of cell membranes, facilitating the uptake of therapeutic substances such as drugs or genetic material.

1. The researchers developed a new electropoion technology to enhance cellular uptake of therapeutic drugs.
2. During the experiment, the electropoion process significantly improved the efficiency of gene delivery.
3. Understanding the mechanism behind electropoion could transform the field of nanomedicine.
4. The team published their findings on electropoion in a reputable scientific journal, showcasing its potential applications.
5. Innovative uses of electropoion are being explored in both cancer treatment and vaccine development.
