

# EMBOLIC

*Meaning: Embolic refers to a condition or event caused by an embolus, such as a blood clot or other material, that travels through the bloodstream and obstructs a blood vessel, often leading to serious medical issues like a stroke.*

1. The patient was diagnosed with an embolic stroke after experiencing sudden weakness on one side of his body.
2. Embolic events can complicate existing cardiovascular conditions and require immediate medical attention.
3. Understanding the mechanisms behind embolic blockages is crucial for developing effective treatment strategies.
4. The doctor explained that an embolic obstruction could lead to serious complications if not addressed promptly.
5. Research is ongoing to find better ways to detect and treat embolic disorders in the circulatory system.
