

EMBOLISM

Meaning: Embolism is the obstruction of a blood vessel by a foreign substance, such as a blood clot, that has traveled through the bloodstream.

1. Embolism can occur when a blood clot travels through the bloodstream and lodges in a vessel.
2. The patient was diagnosed with a pulmonary embolism after experiencing sudden shortness of breath.
3. Timely intervention is crucial in cases of embolism to prevent serious complications.
4. Symptoms of an embolism can vary depending on the location of the blockage in the circulatory system.
5. Doctors often use imaging techniques to identify the source of an embolism and determine the best course of treatment.
