

EMMETROPIC

Meaning: Emmetropic refers to an eye that has normal vision, capable of focusing light accurately on the retina without the need for corrective lenses.

1. An emmetropic eye has the ability to focus light correctly on the retina without the need for corrective lenses.
2. The optometrist confirmed that my vision is emmetropic, meaning I do not require glasses for distance viewing.
3. Understanding emmetropic vision is essential for studying normal eye function and refractive errors.
4. In an emmetropic individual, parallel rays of light from a distance are focused precisely on the retina.
5. The term emmetropic is often used in contrast to myopic or hyperopic conditions in eye care discussions.
