

ENDONEURIUM

Meaning: Endoneurium is the delicate connective tissue that surrounds and protects individual nerve fibers within a nerve.

1. The endoneurium serves as a protective layer around individual nerve fibers.
2. In a healthy nerve, the endoneurium helps maintain the integrity of the axons.
3. Researchers have discovered that the properties of the endoneurium can influence nerve regeneration.
4. Damage to the endoneurium may lead to impaired neural function and sensation.
5. Understanding the role of endoneurium is crucial for developing treatments for peripheral nerve injuries.
