

ENDOSPERM

Meaning: Endosperm is the tissue within seeds that provides essential nutrients to the developing embryo and is often the main part consumed in cereal grains.

1. The endosperm serves as a vital nutrient source for developing seeds.
2. In many cereal grains, the endosperm is the primary component consumed by humans and livestock.
3. During germination, enzymes break down the endosperm to provide energy for the growing plant.
4. The structure of the endosperm can vary significantly between different plant species.
5. In some cases, the endosperm is rich in starch, making it a key ingredient in many food products.
