

ENTOMOPHILOUS

Meaning: Entomophilous describes plants that are pollinated by insects.

1. The entomophilous nature of the flower attracts a variety of pollinators, enhancing its reproduction.
2. Farmers often prefer entomophilous crops because they rely on insects for effective pollination.
3. In entomophilous plants, the structure of the flowers is specifically adapted to facilitate insect visitation.
4. Understanding the entomophilous relationships between plants and insects can help improve biodiversity in agricultural systems.
5. The vibrant colors and sweet scents of entomophilous species make them particularly appealing to bees and butterflies.
